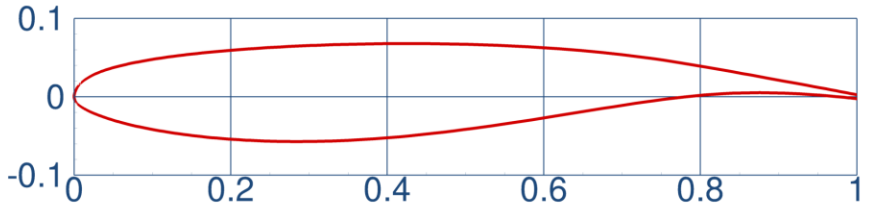
AIAA
SHAPING THE FUTURE OF AEROSPACE

Test Case 1a: ONERA OAT15A Geometry & Data

- **Geometry is available here: (it is very strongly desired to use the provided IGES file in the ONERA OAT15A zip file and not the raw coordinates)**
  https://aiaa-dpw.larc.nasa.gov/geometry.html
- **Committee-supplied RANS grids are available here**
  https://aiaa-dpw.larc.nasa.gov/grids.html
- **Experimental data are available here**
  https://aiaa-dpw.larc.nasa.gov/experiment.html

Test Case 1a: Workshop-Wide Validation

Jaquin, et al. "Experimental Study of Shock Oscillation over a Transonic Supercritical Profiles." AIAA Journal, Vol. 47, No. 9, 2009. Pages 1985-1994.



ONERA OAT15A Transonic Airfoil

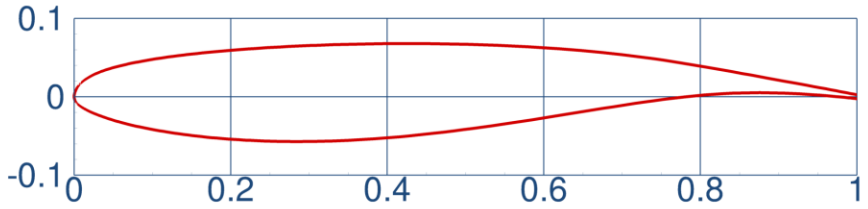
- **Validation of steady CFD analysis, required**
- **Users are encouraged to employ best practices**
- **Settings**
  - Steady CFD (e.g., RANS)
  - Prefer some version of SA, multiple turbulence models can be submitted
  - Use periodic boundary conditions for sidewall boundary conditions
- **Grids**
  - Six-member grid family; four are required, six are desirable
  - Encourage use of committee-supplied grids; user-generated grids are acceptable
  - Three committee-supplied once-cell-wide grid topologies are provided
- **Conditions**
  - Mach 0.73, Re_c=3m (based on chord length), T_{static}= 271 K (487.8 R)
  - Alpha: 1.36, 1.50, 2.50, 3.00, 3.10, Buffet WG supplement: 3.25, 3.40, 3.50, 3.60, 3.90
  - Experimental conditions (for reference): P_{total}=102.4 kPa; P_{static}=71.8 kPa

Test Case 1a: Data Submission

- **Please follow these instructions**
  https://aiaa-dpw.larc.nasa.gov/postprocessing.html
- **Required data**
  - Forces and Moments
    `DPW8-AePW4_ForceMoment_v5.dat`
  - Surface cuts
    `DPW8-AePW4_SectionalCuts_v5.dat`
    Use `sectionalCutter-v2.mcr`
  - Convergence data
    `DPW8-AePW4_Convergence_v5.dat`
  - Contour plots
    Use `airfoilImages-v2.mcr`

Test Case 1b: Buffet Working Group Supplement

Jaquin, et al. "Experimental Study of Shock Oscillation over a Transonic Supercritical Profiles." AIAA Journal, Vol. 47, No. 9, 2009. Pages 1985-1994.



ONERA OAT15A Transonic Airfoil

- **Validation of unsteady CFD analysis, required**
- **Users are encouraged to employ best practices**
- **Settings**
  - Unsteady CFD (e.g., URANS, DES, LES, etc.)
  - Prefer some version of SA, multiple turbulence models can be submitted
  - Use periodic boundary conditions for sidewall boundary conditions
- **Grids**
  - Same geometry options as Test Case 1a
  - Specialized grids for unsteady schemes will likely be generated by participants
- **Conditions**
  - Mach 0.73, Re_c=3m (based on chord length), T_{static}= 271 K (487.8 R)
  - Alpha: 1.36, 1.50, 2.50, 3.00, 3.10, 3.25, 3.40, 3.50, 3.60, and 3.90
  - Experimental (for reference) P_{total}=102.4 kPa; P_{static}=71.8 kPa

Test Case 1b: Data Submission (In Work)

- **Please follow these instructions**
  https://aiaa-dpw.larc.nasa.gov/postprocessing.html
- **Required data**
  - Forces and Moments
    `DPW8-AePW4_UnsteadyForceMoment_v5.dat`
  - Surface cuts
    `DPW8-AePW4_UnsteadySectionalCuts_v5.dat`
  - Spectral content
    `DPW8-AePW4_UnsteadySpectra_v5.dat`
